# STALLION MY.ASSET
## Asset Management Solution

**www.myassetonline.in**

# Do you know what is the current status of your Assets ?

What do I own ?

Where is it ?

What is its remaining useful life ?

What condition is it on ?

What is its remaining economic value ?

My.Asset software helps with this task by maintaining a record of all the assets you want to monitor. It can hold details of their service schedules, maintenance records, depreciated value and schedule for replacement. The software can be set to trigger warnings for any of these events, so you maintain regular cycles of repair and renewal.

## KEY BENEFITS

### Accurate Asset Data
The asset data will be highly accurate with the most recent physical status available for each asset.

### Efficient Asset Audit
The time, mony and efforts spent on asset audit reduces significantly and the physical information ollected during audit is updated real-time and is highly accuate.

### True and Fair Reporting
The fixed assets rreporting in financial statements and other reports is true and fair as accurate physical information is vailable.

### Better Control Over Assets
By capturing Owner, Custodian and User information or each asset, My.Asset ensures high level of accountability.

### Better Procurement Decisions
By knowing what assets are unused, where they are and who has them, beter procurement decisions can be made.

### Reduced Tax Liabilities
By timely poviding ffor/writing off assets that you no longer have or are obsolete or are unused, the overall tax liability reduces.

## Asset Management Solution

**www.myassetonline.in**

One of the most important elements of any business is the ability to manage assets. Asset tracking software can help improve the efficiency and profitability of businesses in nearly every industry. In addition to asset tracking, staying on top of every aspect of operations–including inventory and labour costs as well as work orders and scheduled maintenance–enables companies to better manage all areas of operations and increase productivity.

Each organization establishes its own unique structure and configuration for physical assets. Assets can be centrally located or widely distributed. They can be fixed, moveable or even mobile. They can be moved to new locations, replaced, swapped and removed for repairs. Additionally assets can be mechanical, electrical or civil. A large enterprise may have thousands of individually numbered assets performing one function in a process of many functions. Therefore proper asset management is essential for the production of quality goods and services.

My.Asset maintains details of company assets, everything from PCs, to machine tools, to desks and chairs, to rolling mills. It's of most use when dealing with assets which have a short, fixed service life, and depreciate in value over that life. My.Asset software helps with this task by maintaining a record of all the assets you want to monitor. It can hold details of their service schedules, maintenance records, depreciated value and schedule for replacement. The software can be set to trigger warnings for any of these events, so you maintain regular cycles of repair and renewal. My.Asset tracks where your assets are, what state they are in, and who they are currently assigned to. This application has the tools needed for a business owner who needs to get your fixed assets under control, an accountant who needs to reduce the time that it takes to track your organization's asset inventory.
